

From the inventors of SolaSkirt, the premium pigeon-proofing solution, Titan Eco brings you SolaFence - a sleek, efficient, and space-saving way to harness solar energy.

Why SolaFence?

- ✓ Ideal for properties with limited roof space seeking to maximise solar power generation.
- ✓ Using MCS-approved Bi-facial glass panels to harness sunlight from both sides, increasing annual panel generation by 5-30%, offsetting the traditional losses experienced with vertical solar panels.
- ✓ Install SolaFence like any regular fence, saving valuable plot space unlike a traditional ground-mounted system solar PV System.
- ✓ Versatile configurations: SolaFence is available in both Portrait, maximising kW output per meter, and Landscape, offering adjustable heights to allow for landscaping and plants.
- ✓ Compatible with all string inverters; we recommend installing SolaFence with SolarEdge inverters alongside optimisers to maintain peak performance.

SolaFence

**ENERGY-SMART
FENCING**

Landscape

All Black - Bi-facial
1 Panel - 450W per bay
1st bay width - 1912mm
Additional bay width - 1837mm

- Posts are made from black powder coated galvanised steel.
- Composite gravel boards are 150mm high & extruded from PVCu
- Can be mounted on concrete or concreted into the ground.
- Custom sizing options also available.

1 Gravel Board
Height - 1284mm

2 Gravel Board
Height - 1434mm

3 Gravel Board
Height - 1584mm

4 Gravel Board
Height - 1734mm

5 Gravel Board
Height - 1884mm

Portrait

All Black - Bi-facial
2 Panels - 900W per bay
1st bay width - 2418mm
Additional bay width - 2343mm

1 Gravel Board
Height - 1912mm
